§ 4.6 常返态的判别

主讲：王湘君

首次进入分解定理

引理4.6.1

对 $i, j \in I$,

$$p_{ij}^{(n)} = \sum_{k=1}^n f_{ij}^{(k)} p_{jj}^{(n-k)}. \quad (4.6.1)$$

证 明

$$\begin{aligned} p_{ij}^{(n)} &= P(X_{m+n} = j | X_m = i) = P(X_{m+n} = j, T_{ij} \leq n | X_m = i) \\ &= \sum_{k=1}^n P(X_{m+n} = j, T_{ij} = k | X_m = i) \\ &= \sum_{k=1}^n P(T_{ij} = k | X_m = i) P(X_{m+n} = j | X_m = i, T_{ij} = k) \\ &= \sum_{k=1}^n f_{ij}^{(k)} P(X_{m+n} = j | X_m = i, X_{m+1} \neq j, \dots, X_{m+k-1} \neq j, X_{m+k} = j) \\ &= \sum_{k=1}^n f_{ij}^{(k)} P(X_{m+n} = j | X_{m+k} = j) = \sum_{k=1}^n f_{ij}^{(k)} p_{jj}^{(n-k)}. \end{aligned}$$

常返与非常返的判别准则

定理5.3.6

对任意 $i \in I$, i 常返的充要条件是

$$\sum_{n=1}^{+\infty} p_{ii}^{(n)} = +\infty.$$

证 明 在(5.3.1)中, 取 $i = j$, 并对 n 从1到 N 求和, 有

$$\sum_{n=1}^N p_{ii}^{(n)} = \sum_{n=1}^N \sum_{k=1}^n f_{ii}^{(k)} p_{ii}^{(n-k)},$$

交换求和次序, 有

$$\begin{aligned} \sum_{n=1}^N p_{ii}^{(n)} &= \sum_{k=1}^N \sum_{n=k}^N f_{ii}^{(k)} p_{ii}^{(n-k)} \\ &= \sum_{k=1}^N \left(f_{ii}^{(k)} \sum_{m=0}^{N-k} p_{ii}^{(m)} \right). \end{aligned} \quad (4.6.2)$$

充分性

若 $\sum_{n=1}^{+\infty} p_{ii}^{(n)} = +\infty$, 由(4.6.2),

$$\sum_{n=1}^N p_{ii}^{(n)} = \sum_{k=1}^N \left(f_{ii}^{(k)} \sum_{m=0}^{N-k} p_{ii}^{(m)} \right)$$

$$\sum_{n=1}^N p_{ii}^{(n)} \leq \sum_{k=1}^N \left(f_{ii}^{(k)} \sum_{m=0}^N p_{ii}^{(m)} \right) = \sum_{k=1}^N f_{ii}^{(k)} \sum_{m=0}^N p_{ii}^{(m)},$$

所以,

$$\frac{\sum_{n=1}^N p_{ii}^{(n)}}{1 + \sum_{n=1}^N p_{ii}^{(n)}} \leq \sum_{k=1}^N f_{ii}^{(k)},$$

令 $N \rightarrow +\infty$, 有

$$\sum_{k=1}^{+\infty} f_{ii}^{(k)} = 1.$$

必要性

若 $\sum_{n=1}^{+\infty} p_{ii}^{(n)} = \alpha < +\infty$, 由(4.6.2), 取 $N' < N$, 有

$$\sum_{n=1}^N p_{ii}^{(n)} = \sum_{k=1}^N \left(f_{ii}^{(k)} \sum_{m=0}^{N-k} p_{ii}^{(m)} \right)$$

$$\begin{aligned} \sum_{n=1}^N p_{ii}^{(n)} &\geq \sum_{k=1}^{N'} \left(f_{ii}^{(k)} \sum_{m=0}^{N-k} p_{ii}^{(m)} \right) \\ &\geq \sum_{k=1}^{N'} \left(f_{ii}^{(k)} \sum_{m=0}^{N-N'} p_{ii}^{(m)} \right) \end{aligned}$$

$$= \sum_{k=1}^{N'} f_{ii}^{(k)} \sum_{m=0}^{N-N'} p_{ii}^{(m)},$$

先令 $N \rightarrow +\infty$, 有 $\frac{\alpha}{1+\alpha} \geq \sum_{k=1}^{N'} f_{ii}^{(k)}$,

再令 $N' \rightarrow +\infty$, 有 $1 \geq \frac{\alpha}{1+\alpha} \geq f$

关于判别准则的说明

定义

$$I_n(i) = \begin{cases} 1, & X_n = i, \\ 0, & X_n \neq i, \end{cases} \quad S(i) = \sum_{n=0}^{+\infty} I_n(i),$$

则,

$$\begin{aligned} E(S(i)|X_0 = i) &= \sum_{n=0}^{+\infty} E(I_n(i)|X_0 = i) \\ &= \sum_{n=0}^{+\infty} P(X_n = i|X_0 = i) \\ &= \sum_{n=0}^{+\infty} p_{ii}^{(n)}. \end{aligned}$$

作业

证明

若 i 为非常返态,

$$\sum_{n=0}^{+\infty} p_{ii}^{(n)} = \frac{1}{1 - f_{ii}}.$$
